Microbiological oxidation of cholesterol with Azotobacter. J. Álosyáth and A. Krámlí (Hungarian Biol. Research Inst., Tihany). *Nature* 160, 639(1947).

Cholesterol was dispersed in a culture medium of sucrose, and the mixt. sterilized and added to a culture of an unidentified species of *Azotobacter*. After 14 days' fermentation the mixt. was hydrolyzed with dil. alkali and then extd. with benzene. From the residue of the ext. unchanged cholesterol and methylheptanone (from side-chain splitting) were obtained. Cholestenone (as the semicarbazone) and 7-dehydrocholesterol (by chromatographic adsorption) were also isolated. An unidentified species of *Proctiomyces* (cf. Turfitt, *C.A.* 40, 4105<sup>2</sup>) formed cholestenone less successfully than the *Azotobacter*.

Histamine treatment and *Streptococcus pneumoniae* morbidity in the guinea pig. A. B. L. Besnak, J. Horvath, and A. G. B. Kovach (Hungarian Biol. Research Inst., Tihany, Lake Balaton). *Arch. intern. pharmacodynamie* 81, 147-58 (1950).—Guinea pigs treated for several weeks with small doses of histamine showed lung changes, including increased mucus secretion. These animals and a control group were injected with *Streptococcus pneumoniae*. Neither group developed pneumonia. Both groups became septicemic, with identical symptoms, but the histamine group resisted a larger dose of bacteria than the control group. M. L. C. Bernheim

Soils and Fertilizers

Relation between antibiotic properties of species of *Streptomyces* and their soils. J. Horvath, J. Szilvassy, and L. Felföldy (Biol. Inst. Hung. Acad. Sci., Tibany, Hungary). *Acta Biol. Acad. Sci. Hung.* 4, 453-70 (1953) (in English).— Expts. were performed to det. the possibility of correlating the chem. and phys. properties (for the flora) of soils with the antagonism of *Streptomyces* (1) to *Micrococcus pyogenes* var. *aureus*, *Bacillus subtilis*, and *Escherichia coli* found in each. No such correlation was found. A dextrose-casein (pH 6.5) culture medium was used for the antibiotic tests. A table lists pH (4.5-7.3 range), salt concn. (conductometric method), carbonate content, org. C (from which humus content is calculated), N (Kjeldahl method), Ca, Na, K, and P content for soils of 10 habitats. Too much elution, by ground water or pptn., appears to produce soils whose I are not antibiotic. In soils rated as less than 25-30 years of age no antibiotic strains of any kind could be found.

apparatus for the simplification of the agar disc method."  
ACTA MICROBIOL. ACAD. SCIENT. HUNG. (Budapest) 1954, 3/1-2  
(219-223) Illus. 3

The agar disc method recommended by Raper for the detection of antibiotic produc-  
tion and the determination of antibacterial effects has the disadvantage that cutting  
out pieces of the agar plate and transferring them to the other plates is somewhat  
difficult. The small apparatus constructed by the author eliminates these difficulties.

A picture of the apparatus is given and details of use are described.

"Evaluation of Various Binders Added to Sintering Mixes of Ores"

Budapest, Kohászati Lapok, Vol 98, No 9, Sep 1965, pp 385-391.

Abstract: Vinyl polymer, polyacrylamide, bentonite, red sludge from alumina manufacture, sludge from furnace-gas washing, manganese sludge from the enriching of manganese-bearing ores, carbide-lime, and lime were investigated as to their ability to improve the pellets in sintering mixtures and as to the optimum ratio of admixture. The details of the experimental studies, presented in detail, indicated that the sludges and limes performed best under a variety of conditions; however, some of the others also performed well under specific conditions of use.

"Effect of Binders on the Process and Economy of Ore Sintering"

Budapest, Kohászati Lapok, Vol 99, No 5, May 1966, pp 204-211.

Abstract: The purpose of this article is to provide additional data on the effects of various binders on the formation of raw pellets and on the binding performance of these binders in such pellets. The initial data were presented Ibid., 1965, No 9 [volume number and page numbers not given]. This paper discusses the effects of the binders on the sintering process, productivity, strength of pellets, and manufacturing economy. The relevant data for vinyl polymer, polyacrylamide, bentonite, red sludge, furnace gas washing sludge, furnace gas washing sludge plus calcined lime, manganese sludge, carbide lime, hydrated lime, and calcined lime binders were presented and discussed. Each binder was assessed at to its overall performance in terms of the factors investigated.

AUTHORS: Steingaszner, Pál (Budapest) and Horváth, József (Pétfürdő)

TITLE: On hydrotrefining of lubricating-oil fractions

SOURCE: Academia scientiarum hungaricae. Acta chimica, v. 31, no. 1-3, 1962, 195-206

TEXT: The High-Pressure Research Institute in Budapest-Pétfürdő has conducted hydrotrefining experiments with furfural-extracted lubricating-oil cuts obtained from sulphur-rich Soviet crude. The tests were made in a 200 ml laboratory reactor over a nickel-molybdenum-alumina catalyst at reaction temperatures of 230 - 410°C and pressures of 20 - 80 atm. It was found that the reaction pressure has no influence on the yield and the quality of hydrogenated products, and that the viscosity, viscosity index, and sulphur content of obtained products depends merely on the reaction temperature. This temperature should not exceed 340 - 360°C to avoid undesired viscosity decrease and formation of light distil-

Card 1/2

On hydrorefining ...

H/502/62/031/001/002/002  
D409/D301

lates. The lubricating-oil yield at this temperature range amounts to 95%, the ageing stability is satisfactory, and the oil can be classified as SAE-30. Higher hydrorefining temperatures should only be applied for oil grades where considerably higher viscosity indices are desired. (To attain a viscosity index of 80, the reaction temperature must lie above 370°C, however, the obtained oil can only be classified as SAE-20). The tests also showed that the oxidation stability of the oil increases with decreasing sulphur contents, a result which is in contradiction to the oxidation-inhibiting effect of sulphur compounds as postulated by various authors. Credit is given to Professor M. Freund, E. Vámos, and Gy. Mózes of the MÁFKI Hungarian Crude-Oil and Natural-Gas Research Institute. There are 7 figures and 4 tables. TITLE: The design and evaluation of diesel-oil desulphurization experiments by mathematical-statistical methods  
SOURCE: Academia scientiarum hungaricae. Acta chimica, v. 31, no. 1-3, 1962, 23-30

TEXT: The High-Pressure Research Institute in Budapest - Pétfürdő is conducting research on hydrotreating of sulphur-rich diesel-oil cuts obtained from Soviet crude. To facilitate the tedious experiments, the mathematical-statistical method of so-called factorial experiments with partial repetition was used and is described in this article. This widely used method was slightly modified to meet the requirements of experiments aimed at determining the influence of operating conditions on the efficiency of the hydrotreating process. The test results can generally be formulated

$$z = f(u, v, x, y) + \varepsilon_{u, v, x, y}$$

Card 1/3

H/502/62/031/001/001/002  
D409/D301

The design and evaluation ...

where  $f(u,v,x,y)$  is the systematic influence of operating conditions (pressure, temperature, space velocity, and gas-to-product ratio), and  $\epsilon_{u,v,x,y}$  are random variables with expectation zero. Using this mathematical model and some simplifying assumptions (neglect of higher-order interactions), it was possible to reduce hydro-refining experiments from 81, i.e. all possible combinations of the four factors in three levels, to only 36 at an estimated error (block design) of  $\pm 4 - 5\%$ . The hydrorefining tests proper were performed in a 200 ml laboratory-scale and a 400 l semi-production scale reactor. It was found that the desulphurization efficiency could be increased by raising the reaction temperature (to 360 - 390°C) or pressure, and reducing the space velocity. An optimum desulphurization degree was attained at a gas-to-product ratio of 500 Nm<sup>3</sup>/m<sup>3</sup>. There are 2 figures and 1 table. The English-language references are: O. Kempthorne: The Design and Analysis of Experiments. (Wiley, New York) 1952; D.J. Finney: An Introduction to the Theory of Experimental Design. (The University of Chicago Press) 1960; K.A. "Theoretical Studies on the Potential and Current Requirements of Cathodic Protection on the Basis of Pourbaix Diagrams."

Budapest, Acta Chimica Academiae Scientiarum Hungaricae, Vol 38, No 2, 1963, pages 151-165.

Abstract: [English article, authors' English summary modified] The potential and current requirements of cathodic protection in soils and natural waters with different chemical compositions have been demonstrated on the basis of potential-pH equilibrium diagrams using the systems Fe-H<sub>2</sub>O, Fe-S-H<sub>2</sub>O and Fe-H<sub>2</sub>CO<sub>3</sub>-H<sub>2</sub>O. It was concluded that in aqueous media which contain no complex forming agents or anions which may form solid salts with the metal to be protected, the protective potential -0.85 V (against Cu/CuSO<sub>4</sub> reference electrode) generally accepted in practice, may be quite sufficient. In aqueous media which contain Ca and Mg bicarbonates, cathodic polarization promotes the formation of a solid protective layer, mainly consisting of Ca, Mg and Fe carbonates, which decreases current requirements. In soils and waters which contain hydrogen sulfide, however, more negative protective potentials are necessary. In soils which contain sulfate-producing bacteria, a protective potential of -0.95 V may be sufficient, in aqueous solutions saturated with hydrogen sulfide, however, potential requirements are much higher. Potential and current requirements of cathodic protection are also demonstrated on schematic polarization diagrams. 19 Western, 2 Hungarian references.

"Evaluation of Perineal Prostate Needle Biopsies"

Budapest, Magyar Sebeszet, Vol 19, No 3, Jun 66; pp 203-207.

Abstract: Perineal needle biopsy was performed in 60 cases of prostate disease. The method is simple, free of complications, and recommended for the diagnosis of prostate diseases. The biopsy was carried out with a Vim-Silverman type needle; in cases of suspected tumors the diagnosis is 43.8% certain. (47 References, predominantly Western).

<p><i>CH</i></p> <p>The theory of mixed crystals. István Náray-Szabó and J. I. Horváth. <i>Hung. Acta Chim.</i> 1, No. 3, 34-40 (1948). The lattice energy and lattice const. of the mixed crystals NaCl-NaBr were calcd. by use of the Born-Mayer formula. Only 2 constants (the mol. vol. and the compressibility of the mixed crystals) were necessary. The latter obtained by linear interpolation on the basis of the compressibility values of the pure crystals. The results differed by 0.03-0.5% from those of Born and Mayer, and of Mayer and Helmholtz in case of lattice const. and by somewhat more in case of lattice energy. The calcd. lattice energy of the mixed crystal was somewhat lower than that of the pure salts. István Fényi.</p>

6298. The equations of motion of the electron  
J. L. HÖRVATH. Note in *Acta phys. Hungar.*,  
No. 3-4, 471-494 (1954) in German.

The electron is treated classically and relativistically.  
A tensor is formed to take account of the spin (and the  
velocity-dependent electric dipole) of the electron.  
The Lagrangian and equations of motion are  
obtained and the Riesz method and potential are  
employed. The Liénard-Wiechert potential and the  
potential arising from the magnetic moment of the  
electron are obtained. The calculation of the self-  
force is discussed briefly.

8921. Remarks on the solution of the Schrödinger  
equation by a variational procedure. J. I. HORVATH.  
Note in *Acta phys. Hungar.*, 3, No. 3-4, 925-7 (1954)  
In German.

The deviations of the eigenfunctions obtained in  
atomic problems from the true eigenfunctions are  
discussed. Since the true functions are not known,  
Hartree-Fock functions must be used in their place  
in this comparison. The deviation of the potential  
occurring in the equation for the variational function  
from the true atomic potential, as a function of  $r$ ,  
can also be used as a criterion for the deviation of the  
eigenfunctions.

HORVATH, J. I.

HUNGARY/Theoretical Physics - Classical Electrodynamics. Classical Field Theory. B-3

Abs Jour : Ref Zhur - Fizika, No 4, 1958, No 7569

Author : Horvath, J. I.

Inst : University of Szeged, Hungary

Title : The Bilocal Generalization of the Schroedinger-Gordon Equation

Orig Pub : Acta phys. et chem., 1955, 1, No 1-4, 25-28

Abstract : The author discusses the concept of the bilocality in classical field theory. From the variational principle with a bilocal Lagrangian function he obtains a relativistically-invariant bilocal Schroedinger-Gordon equation.

Card : 1/1

HORVATH, J.

Horvath, J. I. Contribution to the final affine field law.  
 Math. Ann. 161, 151-155 (1955).

The transformation

$$(1) \quad {}^*F_{\mu\nu} = F_{\mu\nu} + 2\partial_{[\mu} p_{\nu]}$$

preserving the tensor yields

$$(2) \quad (n-1) p_{\mu} = F_{\mu} \lambda_{\nu}$$

for

$$(3) \quad {}^*F_{\mu} \lambda_{\nu} = 0$$

so that one obtains for the corresponding contracted curvature tensor  $R_{\mu\nu}$  and  ${}^*R_{\mu\nu}$  the Schrödinger formula

$$(4) \quad R_{\mu\nu} = {}^*R_{\mu\nu} - F_{\mu\nu}$$

with  $F_{\mu\nu}$  proportional to  $\partial_{\mu} p_{\nu}$ . In the last section the author expresses the opinion that "the equations of motion in their parameter invariant form must be invariant against changes of the affinities which preserve the parallelism" (C. A. Hestenes, *Annales de Physique, physique et penseur*, Editions Albert Michel, Paris, 1953, pp. 337-342, MR 16, 634, and J. Horvath, *International Math. Anal.* 3, 645-680 (1954), MR 16, 408). (J. Horvath, J. I. On the theory of the electromagnetic field  
in moving dielectrics. Bull Acad Polon Sci Cl III  
1957, 149-152.

Horvath sets up a variational principle for Maxwell's  
equations in the presence of matter using the polarization  
and the magnetic induction as the variables. He then shows that the  
energy-momentum tensor following from this variational  
principle is the energy-momentum tensor as defined  
by Minkowski. He also states that the energy-momentum  
tensor of Minkowski also satisfies the conservation  
laws of the theory.

 Inst : University of Szeged, Szeged, Hungary  
 Title : Generalized Linear Electrodynamics.I.

Orig Pub : Acta phys. Acad. sci. hung., 1957, 7, No 3, 277-288

Abstract : It is noted that in electrodynamics with higher derivatives,  
 in the Podolsky formulation (Podolsky B., Schwed Ph., Re-  
 views of Modern Physics, 1948, 20, 40) a difficulty arises  
 in quantization, owing to the vanishing of the time component  
 of the generalized momentum of the field. The authors pro-  
 pose a new expression for the Lagrangian function of the  
 free field, at which all the momenta of the field are finite,  
 and the field equations are obtained in the form of general-  
 ized wave equations without using the supplementary Lorentz  
 condition. The canonical formalism of the theory is develop-  
 ed in detail, as are the derivations for the expressions for

"New Indicator for the Mercurimetric Chloride Determination in Bio-  
logical Fluids."

Budapest, Magyar Orvostudomány, Vol XIV, No 6, 1962, pp 665-668.

Abstract: [Authors' summary modified] The advantage of this method over  
the more generally used Volhard Mohr method is the elimination of  
deproteinization, filtering, cooking. It is fast, accurate and not  
light sensitive. No interference is found by ions present in the  
fluid with the potassium iodate endpoint. The described mercuri-  
metric method is suitable for serum, liquor and urine chloride de-  
terminations. If one considers the chemical reaction, this method  
is more realistic and the results are closer to actual values- ac-  
cording to the authors.
